- **Read range (2W ERP)**
  - On metal up to 12m / 40ft
  - Other materials up to 11m / 36ft
- **Applicable surface materials**
  - All surfaces.

  *Read ranges are theoretical values that are calculated for non-reflective environment, in where antennas with maximum directivity are used with maximum allowed operating power according to ETSI EN 302 208 (2W ERP). EU = 865 - 868 MHz. Different surface materials may have an effect on performance.

RADIATION PATTERNS

- **Operating temperature**
  - -35°C to +85°C / -31°F to +185°F
- **Ambient temperature**
  - -35°C to +85°C / -31°F to +185°F
- **Water resistance**
  - IP68
- **Washing resistance**
  - Tolerates industrial washing with standard solvents. Washing process should be tested in final application.
- **Chemical resistance**
  - No physical or performance changes in:
    - 168h Sulfuric acid (10%, pH 2) exposure
    - 168h Motor oil exposure
    - 168h Salt water (salinity 10%) exposure
    - 1h NaOH (10%, pH 13) exposure
  - Acetone should be avoided
- **Storage condition**
  - 1 year in +20°C / 50% RH (shelf life for adhesive)
- **Expected lifetime**
  - Years in normal operating conditions

  *Values are the best recommendations; resistance against environmental conditions depends on the combination of all influencing factors, exposure duration and chemical concentrations. Thus, product's final suitability for certain environmental conditions is recommended to be tested. Contact Confidex for more specific information.

PERSONALIZATION OPTIONS

Pre-encoding
- Customer specific encoding of EPC or user memory. Locking permanently or with password.

Customized printing
- Customer specific layout including logo, text, numbers, barcodes etc.
- Printing is protected with additional cover film.

INSTALLATION INSTRUCTIONS

Confidex Carrier Tough II™ polarization is along the longest dimension of the tag like shown below.

When attaching the tag ensure the following
- Select a smooth surface without uneven areas below tag
- Avoid touching the background adhesive and IC location

When mounting the tag with its adhesive background, clean and dry the surface for obtaining the maximum bond strength. Typical cleaning solvents are heptane or isopropyl alcohol. Do not use household cleaning solvents that contain oils. Carefully read and follow the manufacturer’s precautions and directions for use when working with solvents.

Remove the liner and place the tag on the correct location. Ideal application temperature is from +16°C to +38°C (+60°F to +100°F), bond strength can be improved with firm application pressure and moderate heating from +38°C to +54°C (+100°F to +130°F). Application at temperatures below 10°C (50°F) is not recommended. If application is done at temperatures below 10°C (50°F) surface must be extremely clean, dry and it has to be warmed before attaching the tag to achieve best possible adhesion. Keep the tags in warm before attaching.
